PROFESSIONAL SUMMARY

Senior Fullstack Developer with 6+ years delivering production web and mobile applications across FinTech, HealthTech, SaaS, eCommerce, and sports-tech. Specialized in React/Next.js and Flutter on the front end and NestJS/Node.js and Ruby on Rails on the back end, with deep Stripe payment integration expertise. Track record of owning end-to-end delivery on cross-functional teams of 5–25, from SEC-regulated investment platforms to AI-powered recruitment tools to social sports-tech apps. Proven ability to manage concurrent engagements, interface directly with C-suite stakeholders, and ship complex features on aggressive timelines. Comfortable across the full stack — from pixel-perfect Figma implementations to database design, webhook architectures, and CI/CD pipelines.

CORE COMPETENCIES

Frontend & Mobile: React 18, Next.js, Flutter, TypeScript, Tailwind, MUI, Shadcn/ui	Backend: NestJS, Express, Node.js, Ruby on Rails, GraphQL, RESTful APIs, tRPC	Payments & Compliance: Stripe, Plaid, KYC/AML, Persona
State: Redux Toolkit, Zustand, Jotai, TanStack React Query	Cloud & DevOps: AWS (S3/EC2), Azure DevOps, Vercel, Supabase	Testing: Vitest, React Testing Library, Playwright
UI/UX: Figma-to-Code, Radix UI, Ant Design, Responsive/A11y	Architecture: Monorepo, Refine.dev, Vite	Methods: Agile/Scrum, Code Review, Semantic Release, CI/CD

AI-ASSISTED WORKFLOWS

Daily practitioner of agentic AI coding tools with a structured human-review discipline. Every AI-generated diff is type-checked, linted, run through the full test suite, and verified in a live browser before commit — production code I ship clears the same review bar regardless of how the first draft was authored.

- Claude Code (primary, 2026–present):** Main coding agent for feature work, refactors, and reviews. Author project-scoped Skills (e.g., motion-react, stripe-best-practices, codebase patterns), settings.json Hooks gating quality checks pre- and post-commit, and Subagents (planner, code-reviewer, security-reviewer, tdd-guide) orchestrated via custom slash-command workflows (/orchestrate feature|bugfix|refactor|security). Wire MCP servers (Playwright, Figma, Supabase) for in-loop browser testing and design-token sync.
- Cursor (2024–2025):** Shipped production code in Cursor from v0.x through v2.0, adopting each major release’s workflow shifts — Background Agents (v0.50), Linear-integrated agents (v1.5), Hooks + Team Rules + Agent Autocomplete (v1.7), and parallel multi-agent execution on isolated git worktrees (v2.0). Built fluency in rules-file curation, prompt scaffolding, and AI-pair programming before migrating to Claude Code for deeper subagent and skill-based workflows.
- Reviewing AI-generated code:** Treat every AI output as a PR from a junior — read every diff, catch the long tail of issues automated tools miss (wrong abstractions, dead code, misleading affordances, silent type-cast escape hatches). Never blind-accept, never blind-reject.
- Workflow discipline:** Plan → stress-test → TDD → code review → security review → ship, enforced via skills and hooks rather than memory. Output is auditable, reproducible, and reviewable by any human collaborator.

PROFESSIONAL EXPERIENCE

Software Developer | Insomnia Club, LLC · Full-time

Pompano Beach, FL, United States (Remote) • Feb 2024 – Present

Product: Pinned Golf — Caddie GPS Companion App (Flutter + Rails)

- Own the social and community layer end-to-end across a Flutter (Dart) mobile client and Ruby on Rails REST API for the companion app to Pinned's Caddie GPS hardware — live on Google Play.
- Pivot the friends model to an Instagram-style asymmetric follow graph (follow / accept / reject) and build the friends, community, and game-setup experience.
- Add players to a round with instant mutual befriend of co-players, and ship a course-ratings system with corrected aggregate averages and QA remediation.

Product: Nestwell — Home Health Assessment Platform

- Architect and build a full-stack home health assessment platform using Next.js 14 (App Router), tRPC, Supabase (PostgreSQL), and Tailwind CSS from the ground up.
- Design and implement a config-driven quiz engine, environmental scoring system (air, water, soil, radiation), and personalized health report generation with PDF export.
- Build a complete eCommerce flow — SimpleLab test kit marketplace, Stripe checkout with Payment Elements, webhook-driven order fulfillment, and lab results display.
- Implement real-time features including Supabase Realtime subscriptions, in-app notification system with drawer UI, and environmental score webhooks via pg_net.
- Engineer a membership system (\$14.99/mo or \$149/yr) with Stripe billing, referral program (Stripe-native coupons), and feature flag infrastructure.
- Maintain 600+ unit tests (Vitest), Playwright E2E specs, and comprehensive RLS security policies across 16 database tables and 20+ migrations.

Frontend Developer | Adroit Technology Solutions · Full-time

Los Angeles, CA, United States (Remote) • May 2024 – Feb 2026

Client: Dalmore Group — Securities Compliance & Investment Platform

- Build an enterprise-grade Securities Compliance and Investment Management Platform facilitating private securities offerings under SEC regulations (Reg A, Reg CF, Reg D).
- Develop 3 interconnected portals — Investor Portal (account creation, KYC/AML, document signing, payments), Issuer Portal (offerings management, trade monitoring, disbursements), and Compliance Portal (regulatory review, trade approvals).
- Implement comprehensive identity verification workflows (KYC/AML/AIC/Sanctions screening) using Persona, with role-based access control and full audit trails.
- Integrate multi-channel payment processing via Stripe, Plaid, ACH, and Wire transfers, supporting primary and secondary market trading capabilities.
- Build with React 18, TypeScript, Vite, TailwindCSS, Radix UI, Shadcn/ui, TanStack React Query, Zustand, React Hook Form, Zod, and BoldSign for e-signatures.
- Establish DevOps workflows using Semantic Release, Husky, ESLint, Prettier, and Vitest for automated testing and consistent code quality.

Frontend Developer | Zeligate · Freelance

Gold Coast, QLD, Australia (Remote) • Oct 2024 – Oct 2025

- Built responsive UI components for an AI-powered end-to-end recruitment platform automating candidate sourcing, AI video interviews, intelligent scoring, and automated scheduling.
- Developed the candidate shortlisting and ranking interface, enabling recruiters to review structured interview data and 60-second highlight reels.

- Implemented job board and application management features, transforming job descriptions into structured screening workflows.
- Built the scheduling and availability booking system, reducing coordinator overhead with timezone-aware invite flows across global hiring teams.
- Integrated ATS connectivity surfaces supporting 50+ platforms including Greenhouse, Workday, and BambooHR.
- Collaborated closely with design and product teams to deliver polished, enterprise-grade interfaces with a focus on speed and clarity.

Fullstack Web Developer | **Spritely Apps** · Freelance

Robina, QLD, Australia (Remote) • Jun 2022 – Aug 2024

Client: Trailer2you — Trailer Hire Marketplace

- Led development (70% hands-on) of a trailer hire marketplace serving thousands of Australian customers, building customer-facing booking and admin portal applications.
- Owned full-stack implementation using React, Next.js, MUI, and Node.js with Azure DevOps CI/CD, delivering bi-weekly releases over 2+ years.
- Integrated Stripe payment processing for real-time booking transactions, deposits, and damage protection add-ons.
- Mentored junior developers through code reviews and pair programming, reducing PR turnaround time significantly.

Client: Emergency Medication Mx — HealthTech Platform

- Sole frontend developer for a cloud-based emergency medication management app for patients with asthma, anaphylaxis, angina, and hypoglycemia.
- Built the full Customer Web App and Admin Portal using React, GraphQL, MUI, and AWS Amplify with secure data handling for sensitive medical records.

Client: Guide To Light — Mindfulness & Personal Growth App

- Delivered Admin Portal using React, Next.js, MUI, and RESTful APIs with Stripe subscription billing for premium content access.
- Sole frontend developer coordinating with 2 mobile developers on shared API contracts for the companion iOS/Android app.

Software Developer | **RocketCart, Inc.** · Full-time

Garden Grove, CA, United States (Remote) • Sep 2021 – Dec 2022

- Founding engineer at a Korean grocery delivery startup backed by Alumni Ventures and co-founders of Coupang and Mercari — built the platform from the ground up.
- Architected and shipped the core e-commerce platform powering free next-morning grocery delivery across 5 Southern California counties (LA, Orange, Riverside, San Bernardino, Ventura).
- Built features spanning product catalog, ordering, checkout, and delivery logistics for thousands of Korean grocery SKUs.
- Designed customer storefront using BigCommerce Stencil and Node.js; built operations portal from scratch using Next.js for warehouse inventory and logistics management.
- Operated in a fast-moving 0→1 environment, working directly with CTO on product roadmap and architecture decisions.

Frontend Developer | **Kodebase** · Full-time

Copenhagen, Denmark (Remote) • May 2021 – Sep 2021

Client: Aarsleff Construction — Construction Management CMS

- Built a construction management CMS with drag-and-drop calendar for scheduling vehicles, employees, and project timelines across multiple job sites.
- Implemented the full frontend using React and FluentUI, delivering customizable views for project managers to track resource allocation in real time.

Frontend Web Developer | **CyberLogitec** · Full-time

Singapore (On-site) • Feb 2020 – May 2021

Client: OPUS9 — Digital Freight Brokerage

- Built customer-facing and admin portal features for an award-winning digital freight broker connecting US shippers with carriers for pricing, routing, and delivery tracking.
- Developed responsive React interfaces with RESTful APIs supporting complex logistics workflows and real-time shipment tracking.
- Improved platform performance through code optimization, and built an Autofill Chrome Extension as a side project using React Hooks.
- Worked directly with the US-based team in daily meetings, managing cross-timezone collaboration and delivering features on a bi-weekly sprint cadence.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL, Java, Dart

Frontend: React 18, Next.js, Flutter, Tailwind CSS, MUI, Shadcn/ui, Radix UI, Ant Design, DaisyUI, FluentUI, Refine.dev, Stencil

Backend: NestJS, Express.js, Node.js, Ruby on Rails, GraphQL, RESTful APIs, tRPC, TypeORM

State & Data: TanStack React Query, Redux Toolkit, Zustand, Jotai, React Hook Form, Zod

Payments & Identity: Stripe (Checkout, Subscriptions, Payment Intents, Connect), Plaid, Persona (KYC/AML), BoldSign

Cloud & DevOps: AWS (S3, EC2), Azure DevOps, Vercel, Supabase, Amplify, Docker, Semantic Release, CI/CD

Databases: PostgreSQL, Supabase, Snowflake, TypeORM

Testing: Vitest, React Testing Library, Playwright

Tools: Git, Jira, Figma, VS Code, Claude Code, Cursor, MCP, Vite, Husky, ESLint, Prettier, Postman
